

App name: QuickEats

MVP:

- List of restaurants available for delivery - user can see and select where to order food from
- Delivery time scheduler - enter time that meal should be brought to you
- Links to participating establishments - connect to restaurant site to select menu options and then link back to app.
- Provide delivery info - enter delivery address and any important info for deliverer
- Checkout / Submit - review order, delivery time, and delivery address

User Stories

- As a app user, I want to be able to select my restaurant of choice, so that I can anticipate a meal that sounds good to me today.
- As a customer, I want to provide the right time I can accept a meal delivery, so that I can keep to my tight schedule.
- As a user, I want to be able to select my menu items from the restaurants site, so that I can easily navigate to my choice to save time ordering.
- As a customer, I want to be able to give special delivery instructions, so that I can not have any complications with receiving my food.
- As a app user, I want to be able to review my order, so that I can ensure that everything looks correct before submitting.
- As a restaurant, I want to be able to deliver food when it's hot, so that I can satisfy customers with quick food freshly made.
- As a food provider, I want to be able to show my logo on the app, so that I app users can quickly identify our establishment.
